SUMMARY

6

6 БУМ ОНЛАЙН-ОБУЧЕНИЯ

Учеба на дистанции в экстремальной ситуации.

Насколько удачным оказался опыт, навязанный нам условиями пандемии.

8 ВУЗЫ

Система образования уже не будет прежней.

Захотят ли учебные заведения вернуться к традиционному формату?

10 АНАЛИЗ

Практика подготовки в области ГО и ЧС.

Новые подходы к проведению учений и тренировок.

14 ВОЗМОЖНОСТИ

Обучение в условиях пандемии.

Дистанционный формат решает проблему общедоступности образования.

18 СПРАШИВАЙТЕ – ОТВЕЧАЕМ

Образовательный процесс в режиме онлайн.

Советует эксперт в области инновационных средств обучения.

19 ВЫРЕЖИ И ИЗУЧИ

Программа подготовки дежурно-диспетчерского персонала единых дежурно-диспетчерских служб муниципальных образований.

Новый документ вступил в силу с 1 июля 2020 г.

23 ИННОВАЦИИ

Обеспечение безопасности во время службы.

Внедрение современных технологий в процесс обучения будущих командиров.

26 ОПЫТ

Значение физической подготовки спасателя и пожарного.

Особенно актуально поддерживать форму в условиях вынужденных самоограничений.

28 ПОИСКОВИК

Веб-сервисы для самообразования.

Отечественные интернет-ресурсы для проведения онлайн-уроков.

10

A boom of online training is the main topic of this issue of "Grazhdanskaya Oborona" magazine (pp. 6-29). During the coronavirus pandemic nearly all Russian education institutions switched to various forms of online training. We will analyze how online lessons solve the issue of availability of education in the current situation (pp. 14-17). Also, we suggest analyzing how successful this experience was, while forced on us by the emergency situation of the pandemic, and what special features of these innovations are (pp. 6-7).

Reviewing the existing national system of training of governing bodies, forces and people in the area of civil defense and protection from emergency situation, our authors share new approaches to holding trainings for governing bodies of various levels (pp. 10-13). This provided, a lot of educational policy specialists believe that many educational institutions will not fully switch back to traditional and more familiar forms (pp. 8-9). A well-respected educational innovation expert answers our readers' questions and gives recommendations on organizations of online training (p. 18). We also provide a list of web-services and Internet sites that are really aimed for holding online lessons (p. 28).

As for other methodical guidelines, we would like to attract our readers' attention to the regulations of operating procedures of certification commissions certifying federal civil public servants in the EMERCOM system (pp. 19-22), and another article describes monitoring

36

and organization of emergency works at hazardous underwater sites (pp. 45-47).

The issues of everyday response and elimination of consequences of emergency situations are presented in articles about EMERCOM activity on collection and disposal of oil products at the site of disaster in Norilsk (pp. 29-31), COVID-19 disinfection performed by Leader Center for High Risk Rescue Operations (pp. 32-35) and the EMERCOM international humanitarian interaction in the beginning of summer this year (pp. 62-63).

Our authors also paid attention to historical issues. For example, our journalist made a report on opening a memorial to Soviet warriors that fought at Rzhev, one of the most important events dedicated to the 75th anniversary of the Great Victory (pp. 50-52). Two other texts tell our readers about heroic deeds of the Soviet NKVD local air defense (pp. 53-56) and transformation of this structure into the National Civil Defense System after the war (pp. 57-59).

Finally we would like to remind that exactly 20 years ago, on July 29, 2000 the last underground explosion shook the land of Kazakhstan. On this day the last mine gallery for nuclear tests was exploded at Semipalatinsk test site (pp. 60-61).
